SUMMARY

Software Engineer with 2+ years of experience building production-grade web and cloud systems. Strong backend focus in Java and .NET with hands-on experience designing RESTful APIs, optimizing database performance, and improving system reliability at scale. Proven track record of minimizing latency, increasing test coverage, and accelerating CI/CD pipelines across cloud environments (AWS, Azure). Experienced in cross-functional Agile teams delivering high-impact, user-facing software.

EDUCATION

Northeastern University
Master of Science, Information Systems (Computer Software Engineering)
• Courses: Data Structures & Algorithms, OOP & Design Patterns, Web Development & User Experience, Cloud Computing

Boston, MA
Jan 2023 – May 2025

PROFESSIONAL EXPERIENCE

EMA Wellness | Software Developer

Oct 2025 – Present

- Designed and implemented 3+ backend features using ASP.NET Core and REST APIs, translating business requirements into validated domain logic supporting core user workflows
- Debugged and validated complex SQL Server data flows using SSMS, decreasing production defects across 10+ Jira stories and improving overall system reliability
- Increased automated test coverage by ~30% by building and maintaining Testim test suites, lowering manual regression effort and improving release confidence across sprint cycles
- Collaborated in Agile sprint planning, code reviews, and deployments, contributing to smoother Azure-based releases with fewer rollout blockers

Commonwealth Financial Network | Software Engineer Co-op

Jul 2024 – Dec 2024

- Migrated 87 advisor websites from Drupal to FMG Suite CMS by developing reusable templates and modular components, contributing to a platform rollout spanning 842 production sites
- Implemented Google Analytics 4 (GA4) instrumentation and executed A/B experiments across 80+ sites, enabling improved visibility into user behavior and engagement funnels
- Identified and remediated accessibility defects using axe, WAVE, and manual audits, achieving WCAG/ADA compliance across high-traffic sites serving 10,000+ users
- Improved site performance and responsiveness across devices by auditing 54 websites with Lighthouse and Chrome DevTools, identifying and fixing load-time bottlenecks

Ram LLC | Full Stack Developer

Jul 2021 – Dec 2022

- Optimized backend RESTful API endpoints in a logistics SaaS platform developed with Java (Spring Boot) by restructuring SQL queries and adding database indexes, cutting average response time by up to 50% in production
- Refactored authentication from JWT to OAuth 2.0 in Spring Boot microservices, enhancing security posture and reducing login-related support tickets across client-facing modules
- Built and modularized reusable UI components using React and TypeScript for 15+ operational customer-facing dashboards and internal workflows, accelerating development
- Initiated a proof of concept for CI/CD automation using Jenkins and Docker, then scaled it to deploy Java microservices on AWS EC2, decreasing deployment time by 70% and increasing reliability
- Translated Figma and Adobe XD designs into production-ready UI through close collaboration with designers, reducing rework by 25%
- Accelerated page load time from 4.2s to 2.7s by debugging JavaScript and implementing asset compression and lazy loading

TECHNICAL SKILLS

- Programming Languages:** JavaScript (ES6+), Java (8+), C#, TypeScript, Python
- Web Technologies:** React.js, Node.js, Express.js, Next.js, Jest, Cypress, Selenium, Testim, REST APIs, Spring Boot, .NET Core
- Databases:** SQL (PostgreSQL, MySQL, MS SQL Server), NoSQL (MongoDB, Redis, DynamoDB)
- Cloud Platforms:** AWS (EC2, Lambda, S3, RDS, API Gateway), Azure; Familiar: ECS, EKS, Unix/Linux
- Software & Tools:** JIRA, Confluence, Shell Scripting, Postman, GitHub, VS Code, IntelliJ, Git, GitHub Actions

PROJECTS

ICE Tracker (CivicHacks 2025 Hackathon) | ReactJS, Supabase, Mapbox, Python |

Feb 2025

- Embedded an AI chatbot using OpenAI API for instant immigration assistance, enabling automated support and eliminating manual response dependency
- Designed the system to support real-time data ingestion and map-based visualization, enabling scalable expansion as datasets grow
- Implemented a programmatic voice-based FAQ system for on-demand 24/7 user support using Twilio and OpenAI API

Assignment Management Application | AWS, GCP, TypeScript, Pulumi, Packer, Jest, Mailgun |

Nov 2023

- Provisioned cloud infrastructure on AWS using Pulumi (AWS Lambda, S3, API Gateway), cutting deployment time by 50%
- Programmed AMI creation using Packer for faster and scalable EC2 spin-ups with installed dependencies and monitoring tools
- Designed and tested 4 REST endpoints to manage assignment data and integrated Mailgun for email notifications

GrubBites | React, Node.js, Express.js, MongoDB, Stripe API, JWT, Jest |

Aug 2023

- Designed and implemented RESTful APIs for orders, menus, and users with Express.js and MongoDB, optimizing queries
- Practiced test-driven development, achieving 85% test coverage and minimizing regression defects post-deployment
